

DATASHEET

rev. 00 - 11/11/2022

A/C system enhancer in syringe 30 ml

TSC400028

DESCRIPTION

Catalysing the air conditioning systems increases the fluidity of the oil, decreases the energy consumption and improves the efficiency of the refrigerant system.

Thanks to its innovative formula, it is able to reduce the coefficient of friction and to carry out a deep cleaning on the walls of the pipes, optimising the heat exchange and allowing the air conditioner to operate at maximum efficiency.

The air produced will be colder and circulate faster, maintenance costs are reduced, the life of the system is extended and, thanks to the increase in lubricating power and the decrease in friction, there will be improved compressor performance.

TECHNICAL SPECIFICATIONS:

- 30 ml syringe
- For systems up to 1 kg of refrigerant gas use 30 ml of the product (1 syringes)
- For systems from 1.0 kg to 3.0 kg of refrigerant gas use 60 ml of the product (2 syringes)
