DESCRIPTION

Visible linear diffuser in anti-condensate PVC with adjustable calibration damper, central baffle with 3 slots, white. Diffusers are used in places where the ceiling design has to be assured, such as offices, meeting rooms and hotels, ensuring uniform air diffusion and high thermal induction. In contrast to aluminium, due to its physical characteristics PVC does not produce condensate; this avoids the formation of fungi, mould and bacteria inside the diffuser and ensures excellent wall insulation. It is fixed to the plenum, which can be purchased separately, using front screws and mobile C brackets. The damper is used to control the required amount of air and can be calibrated using a screwdriver. Housings are obtained from inside the profiles to enable the mounting of adjustable PVC baffles. By changing the baffle direction it is possible to deliver the air flow according to the place of installation, if necessary obtaining a Coanda effect.

ACCESSORIES

- Plenum in insulated galvanised metal sheet, can be purchased separately.
- Continuity kit, can be purchased separately.
